## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Group I. Claims 1-12, drawn to the process of immobilizing a composition of various nucleic acid substrates, classified in class 536, subclass 25.3.
- Group II. Claim 13, drawn to the product of immobilized compositions of various nucleic acid substrates, classified in class 536, subclass 24.3.
- Group III. Claim 14, drawn to the methods of using of immobilized compositions of various nucleic acid substrates, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the nucleic acids can be obtained by chemical synthesis or photoprenylmethology or the method of Group I.

2. Inventions Group II and Group III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of the combined nucleic acids can be made by, cloning or separating nucleic sequences or polymerase chain reactions (PCR) or the method of Group III.

3. Inventions Group I and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are distinct in process steps, the functions and results that that may be obtained for example Group I may function to create a desired array, while Group III will give results for the detection or primers of a nucleic acid.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. During a telephone conversation with William Ford on February 21, 2002 a provisional election was not made to prosecute the any of the inventive Groups without further discussion with the inventors and requested the restrictions be sent by mail.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
